

1 In the Specification:

2 Kindly replace the Abstract of the Disclosure section
3 with the following replacement Abstract of the Disclosure
4 section:

5 A device for holding a bucket of frozen chum is
6 fabricated primarily out of flexible plastic material that
7 is integrally formed with a toroidal sleeve there around.
8 The toroidal sleeve has a plastic foam floatation element
9 housed therein, so that a frozen bucket of chum that is
10 installed and contained in a cylindrical component of the
11 device is maintained at a right distance below the surface
12 of a body of water in which the device has been deployed.
13 A plurality of holes are provided in components of the
14 device, so that chum matter can pass there through as the
15 frozen chum melts and exits the device into the surrounding
16 body of water to attract fish. The device is also provided
17 with a drawstring that cooperates with an upper edge of the
18 cylindrical containing component to captivate the frozen
19 bucket of chum therein.
